Robert Gardiner Favors National Wheat Board

Gave His Views at the Calgary Grain Commission

One of the outstanding contributions at the sittings of the Targeron Royal Grain Inquiry Commission, held in Calgary was that made by Robert Gardiner, president of the U.F.A. who came out flat footedly for a national wheat board handling all the grain.

The reasoned utterances of Mr Gardiner and the breadth of knowledge he displayed in discussing the various phases of the question, made a decided impression.

High Wind Did Damage in Sask.

Alt. Full of Sand in Eastern End of Alberta

Weather conditions last Tuesday were very peculiar. The air in all directions was full of dust so thick that visibility was badly obstructed. The peculiar thing was that there was no wind around here but it appears there was a high wind in Saskatchewan where considerable damage was done to thousands of acres of growing wheat around Regina. Weyburn, Assiniboia, Viceroy, Shaunassay and Swift Current.

A strip of country 300 miles long and 150 miles wide was affected.

Fine Program Coming Here Friday Evening

Will Be Put On By Miss Colter's Pupils

Last week the Empress Theatre was filled to capacity for the entertainment put on by Miss Colter's pupils.

Practically the same program will be put on in the Little Theatre building here on Friday evening of this week, under the auspices of the local Social Credit group.

Tickets are now out for this entertainment. Be sure to get yours as soon as possible to save disappointment as tickets are going rapidly.

A most interesting program made up of a great variety of selections by young and old is assured. Redcliff citizens saw a few of Miss Colter's pupils perform here a few weeks ago and were delighted with their numbers. Don't miss this one. Admission is only 25c for adults and 5c for children.

Rebekah's Farewell For Mrs. Wheeler

Members of the local Rebekah Lodge had a farewell party at the home of Mrs F Cann for Mrs W Wheeler who left last week for England where she will reside in future. During the evening Mrs Wheeler was presented with a lodge pin by the members. A pleasant social evening was spent and many regrets were expressed for the departure of their popular sister.

At the Coronation Canadian soldiers took over the Guard at Buckingham Palace with Capt. McQueen, of Medicine Hat in charge. The R.C.M.P. were a guard of honor for our Lt. T. Knight, C.S.N.P. and C.S.M. Gray. The message from the machine were Sgt. Ewart and Capt. McQueen. The message from the machine were Sgt. Ewart and Capt. McQueen.

Little Theatre Association To on Meet Tuesday

Will Be Held In Redcliff Hotel

The annual meeting of the Little Theatre Association will be held in the rooms of the Hotel on Tuesday evening May 25th at 8:45 P.M. sharp.

It is the intention of the executive in charge to make arrangements for the closing of the theatre permanently unless greater interest in Little Theatre affairs is manifested by the public in general.

It is therefore imperative that all citizens interested in the maintenance of the town theatre should be on hand on Tuesday evening to discuss ways and means of carrying on.

If the theatre has to be closed for lack of interest it will mean that Redcliff will be without a building where a large crowd can be accommodated.

Under the so-called "Country Plan" for the enlarged school divisions in southern Alberta, there are complaints about what is considered excessive tax rates.

Every nation is represented at the coronation and it is estimated that over 25,000 Canadians were present. The event will mean over \$150,000,000 to the old country.

During the Coronation program here a military place flew over Redcliff and dropped a message for Mr A G Osgood in charge of the local unit. The message complemented Redcliff for its fitting celebration. Those in the machine were Sgt. Ewart and Capt. McQueen. The message from the machine were Sgt. Ewart and Capt. McQueen.

LEGION MEETING

A general meeting of the local Canadian Legion No. 6 will be held in the club rooms on Monday evening May 24th at 8 o'clock. A full attendance is requested.

S. C. Insurgents Held Meeting in Medicine Hat

Four M. L. A's Took Part In The Discussion

Special Credit insurgents held a meeting in Park Hall Medicine Hat last Monday evening and the building was packed to capacity.

The three insurgent speakers were E. C. Cain member for Bow Valley, Dr. Brown for Pembina and A. V. Boucher for Lac Ste. Anne. F. M. Baker the loyalist member for Clover Bar, was the speaker for the Aherhart government.

A. W. Flamme insurgent member for Cypress acted as chairman. Insurgent speakers gave a thorough review of their reasons for the stand they have taken. Showing it was in order to endeavor to fulfill their election promises to put the Social Credit system in operation.

Mr. Baker supported the Cabinet and appealed for some way which could be found to close the breach in the ranks of the members.

Y. P. L. Have Picnic At River Monday

Under the auspices of the C. G. T. groups of the United Church a Mother and Daughter picnic will be held in the basement of the church on Monday, May 24th at 5:45 p.m. A program will be provided and addresses will be given by Miss Edith South and the minister.

Coronation Baby Born To Rev. & Mrs. Hamnett

Arrived During Afternoon of the Coronation Celebration

During the late afternoon when the citizens of Redcliff were enjoying the coronation program, news was received announcing the birth of a son to Rev. and Mrs. Hamnett. He has been named after His Majesty King George and the late R. Francis Cox: George Francis Hamnett.

All are glad to know that mother and son are progressing favorably.

Our newly arrived citizen, born on such an eventful day for the British Empire, is to be presented with a cup from the Coronation Committee.

Mother and Daughter Banquet May 21 st

On Monday evening a large number of Gordon Memorial young people journeyed to the river where a splendid spot and we had previously been arranged by Heber Karstad and Rev. Dutton. The party had a happy time together, including boating and singing of lively tunes, accompanied by Jack Brydie and Bob Buchholz on the guitars. The evening ended with a good repeat of waltzes, rolls and coffee.

Mrs J. Kitchener leaves Friday for Rocky Mountain House where she will visit her daughter Mrs A. Tikhane for a few weeks.

Rev. and Mrs. Ellison will leave for Calgary on Monday, where they will attend the annual meetings of the Alberta Convention of the United Church which will be held in Wesley Church.

Mr Hon Philip Snowden chairman of the Exchequer, died from heart trouble last Saturday.

Local Coronation Committee Held Meeting Tuesday

Surplus of Funds To Be Handled Over to Local Organizations

The Central Committee that was responsible for the Coronation Celebration held their final meeting in the Town Hall on Tuesday night, with nearly all the members present. Rev. H. V. Ellison, general chairman presiding. The members were feeling jubilant at the great success of the celebration and all matters of business were attended to.

A letter of appreciation was ordered sent to Col. Hoover Commanding the S.A.R. and the Bag in Band, who so splendidly helped in the days preceding.

A detailed financial account was given by Mr J. R. MacKenzie showing \$387.00 had been donated towards the Coronation Fund, and after all expenses paid there will be about \$90.00 of a balance left over. The committee very carefully considered the allotment of this amount, and after careful consideration decided that it should be given to the local Red Cross, with \$75 earmarked for the local Swimming Pool, the remainder to be used for helping needy Redcliff families.

The matter of the photograph taken of the Celebration was discussed and it was decided the last day of entering these would be Saturday May 22nd, and a small committee was appointed to judge these, and to decide the two winners, who will receive first prize \$7.00 and second prize \$2.00.

It was decided to give the Coronation Baby, son of Rev. and Mrs. Hamnett, a "nationally inscribed Coronation pin" to be presented later by the chairman. It was decided to present all the teaching staff with medals.

On behalf of the committee the chairman wishes "truly" to thank all the citizens of Redcliff and others who kindly co-operated to make the day such a splendid success. Thanks to the Manned Choir, under Mrs. Kell, who helped in the singing of the day is also given.

All who are entering the photograph competition, are asked to leave the film as property of the committee.

According to a return handed down during the recent session of the legislature, 69 members of the civil service were dismissed and nearly 200 others handed in their resignations, either voluntary or otherwise.

stand in Hyde Park. Then will follow in quick succession an Empire Youth Rally at the Albert Hall, May 11, the Empire Service of Youth to be held in Westminster Abbey, which will still be in the machine were Sgt. Ewart and Capt. McQueen. The message from the machine were Sgt. Ewart and Capt. McQueen.

Investigating Ways And Means Of Extending The Use Of Wood For Fuel

Due mainly to the economic stress of recent years, the question of fuel, the other similar problems facing Canadians, has been more closely examined than ever before. Fuel bulks largely in the budget of the average family as well as in the economy of most industries, so that it is a matter of major importance to all citizens of the Dominion. Wood as a fuel has a very definite field but in that field it is the cheapest fuel and this is the chief reason for its increased use since about 1900. Previous to that date wood had come to be regarded as a somewhat old-fashioned fuel, largely through lack of attention to the betterment of methods of marketing and utilization.

It is now felt that if the methods of selling, measuring, and burning wood can be improved the use of this fuel will be more appreciated. To this end the Forest Products Laboratories, Forest Service, Department of the Interior, in co-operation with the Pulp Research Laboratories and other organizations, are investigating ways and means of extending the use of wood for fuel.

Manufacturers of stoves and other heating appliances in Canada are awake to the new development and consequently are carefully studying designs for equipment for the more economical use of wood. In the so-called round fuel, in certain European countries wood-burning stoves and furnaces designed on new principles have been introduced for which high efficiency is claimed. The basic feature of these modern European wood stoves is that they are designed for slow combustion. To accomplish this the equipment is made as airtight as possible and fitted with closely controlled dampers. Long travel for the inflammable gases is provided within the stove itself, thus ensuring that, at normal rates of complete combustion takes place before the gases escape into the chimney.

Most of these stoves and furnaces have fuel magazines which require replenishing only two or three times a day. The burning of the wood itself is confined to a small area near the base of the magazine, but the combustion of the gases which are formed takes place in an entirely separate chamber. The adaptability of the equipment developed overseas to meet Canadian conditions is one of the questions being studied and there is no doubt that much of value is being gained from the research already conducted.

The extension of the use of wood for fuel, especially that not just used in logging or in the saw-mill, would be of great advantage to producer, consumer, and laborer. The cut of fuelwood is adequately regulated the increased demand may be expected to enhance the value of Canada's forest stores.

Valuable Bit Of Advice

Men Of Travel Bureau Officially Appear To Us Canada

Not the least valuable bit of advice given by Leo Dolan, of the Canadian Travel Bureau, during his visit here, says the *Star*, is that the distinctive Canadian and British atmosphere should be maintained in attitude to tourists.

United States visitors who come here on vacation want to see something different. They want to see the Mounted Police and the Union Jack. They can find enough "George Washington" hot dog stands and "Indiana" restaurants at home and would prefer to find here, says Dolan, names reminiscent of Hawthorne or of the local life.

They want to see Indian wigwags, moccasins, blankets, and shirts and prospectors' packs. They want a good place to sleep and good meals to eat and so on. But they want also an "atmosphere."

So Algonia people who cater to American tourists should not appear American names and customs.

A Real Tribute

An American girl about to visit England, was advised by a friend to see Lincoln Cathedral.

"Oh, indeed," said the girl, "is there a Lincoln Cathedral in England?"

"There is, and a superb building," was the reply.

"Say, now," she exclaimed, "wasn't just the sweet of them to name it after our Abe?"

Clouds do not burst during a cloudless, rainless day up by the clouds suddenly fall when the currents weaken.

The Use Of Superlatives

Great Many People Have Tendency To Overdo It

A gentleman in Massachusetts writes to his favorite newspaper protesting against what he calls the American "tendency to indulge in superlatives."

A public entertainer is referred to as "America's busiest man." The winner of a popularity contest is touted as "the prettiest girl in the world."

A man says of his wife: "She is the best housekeeper the Lord ever made."

And the gentleman in Massachusetts continues to stir up his list of much abused superlatives until the reader is inclined to agree with him that Americans use superlatives superlatively. He says that some other nations can out-superlative them.

Superlatives, as he contends, are dangerous words, which should not be entrusted to reckless tongues or pens, any more than guns should be put into the hands of children.

Who actually knows who is "America's busiest man" or who is "the prettiest girl in the world" or that, at such remote point to geography and history, the Lord has not created a better housekeeper than the one who flips the flap-jacks for his breakfast?

And if one does not know these things, why talk or write as if he did know them?

Superlatives should be reserved for the comicalist. — Detroit Free Press.

To Grow Old Gracefully

Everyone Should Develop Hobby And Have Young Friends

Develop a hobby and have old advisers Dr. Irving S. Cutler of Northwestern University, St. Paul, Minn.

He listed the companionship of young persons and a lively interest in everyday affairs as added requirements for better happiness in the winter years of life.

"Life's crowning glory is to grow old gracefully," said Dr. Cutler, professor of Medicine in the International medical school, at the International Medical Association of America.

"Old age need not be regarded as a disagreeable period of life. We need the fire of youth, the sane thinking of the mature mind and the wisdom that comes with ripening age and the later years of a well-ordered life and mind."

Every one should develop a hobby, Dr. Cutler said, but it should not be one to overtax the strength while engaging the mind. In old age, he said, "the mode of life must be changed, strength must be conserved, and every sort of activity provided."

To avoid loneliness, loneliness and self-pity, every one should cultivate the friendship and association of persons of younger years. Old age is as natural as growth and development and doctors should give it as much attention as they do to the young.

Extend Radio Programs

Canadian Broadcasting Corporation Plans To Increase Hours On The Air

The Canadian Broadcasting Corporation intends to extend its program "either locally or generally," Major W. Gladstone Murray, general manager of the corporation, said while on a tour of the Maritime provinces.

"We want to be confined to six hours on the air," he said. An attempt would be made to extend the corporation's "line time" if the latter could be secured for longer hours economically. Otherwise the added program would be broadcast from individual stations.

The new head of the Canadian Broadcasting Corporation said it would be the policy of the board of governors to use their facilities in stimulating "a sense of Canadian unity."

Vegetable Oil For Watches Discovery of a vegetable oil similar to the expensive sperm oil of the whale, which is used in oiling watches and for other purposes, was reported by scientists of the United States agriculture department.

CORONATION ROBES FOR BARONS

This photograph shows the Coronation robe to be worn by Barons when King Edward VIII. is formally crowned next May. It is of crimson velvet with miniver (ermine) cape.

Not Worked For Centuries

Stones For Viny's Memorial Taken From Old Quarry

Italian and Jugo-Slav workmen fought over who should quarry the stone which went into Canada's war memorial at Viny, Mc P. Gorge of the Federal Department of Mines, told the Ottawa branch of the Engineering Institute of Canada in an address on the creation of the memorial.

The stone was taken from the ancient quarry in Dalmatia which had been mined since the days of the Roman Empire. The last previous operation there was the quarrying of stone for the palace of Diocletian between 280 and 305 A.D.

The English contractors charged with obtaining the stone first took Italian workmen to the quarry but the Jugo-Slavs objected to the importation of labor and a fight broke out. The Jugo-Slavs had their way and the contractors were forced to use the Italian stone-cutters here and train Jugo-Slavs to do the work.

Each stone was cut to specifications and numbered at the quarry before starting on its 1,000-mile journey to Viny. The cutting was done with a wire saw.

One chance in a million—a derelict train ploughed along half a mile and then mounted the rails again correctly at Yarmouth, England.

"Breathlessness is no good without a fast engine," declares an inventor. For example, look at the tortoise.

Old Laws In New York

Charter Has Many Not Suitable For Modern Times

The city of New York has a charter which contains many ordinances for the good government of the community. The charter is very old, a real "horse and buggy" affair, and when the city fathers decided that it should be brought up to date to meet modern conditions they found that it was contrary to law to lead cattle through the streets unless there's a boy at the head of each steer; nerve hot tea in glasses in a restaurant; take newspapers into parks to sit on; lose bean bags in the parks.

It was also found that anyone driving a sleigh must have a sufficient number of bells to give warning of approach, and that if anyone saw a stray pig in the streets it must be taken to the nearest pound.

Very likely there are many New Yorkers who have not seen a porker and the hoof. They only know it as "hater."

Reason For Invasion

School teachers of Grimsby, Ont., believe they have the explanation for an invasion by stock salesmen. They've noted that people write away for information on Canada's mining resources. Evidently the salesmen thought Grimsby people were becoming mine-minded and made a concerted invasion of the town.

Strawberries contain a larger percentage of water than does milk.

New Species Of Wheat Said To Have Complete Freedom From Rusts And Smuts

"Mary Had A Little Lamb"

Famous Jingle Is New The Center Of A Literary Controversy

Mary's immortal, school-going rhyme may become the centre of a literary controversy as soon as the New Hampshire Guide, now being prepared by a federal writers' project, comes off the press.

The Guide will attest that Mrs. Sarah Joseph Hale, native of Newbury, N.H., not Mrs. Mary Sawyer, of Somerville, Mass., was responsible for the nursery rhyme, "Mary had a little lamb."

In support of their contention, the writers will identify the very school house in which, the rhyme asserts, the lamb followed Mary.

Henry Ford, motor manufacturer and collector of ancient windmills, red sneakers and other Americana, is a principal supporter of the Mrs. Sawyer version.

Back in 1878, Mrs. Sawyer claimed she was the original Mary and that a 12-year-old boy, John Roulstone, of Sterling, Mass., penned the first 12 lines of the poem in support of her claim. Ford purchased the school house and set it up near the old way-side inn, which she also owns, at Sudbury, Mass.

The works progress administration literary sleuths claim their search for the real Mary.

Mrs. Hale, later editor of "Lamb's Magazine," co-organizer of Vassar college, wrote the jingle from her own personal experience, and that was published in 1830, nearly 50 years before Mrs. Sawyer made her claim.

Defends College Men

Different Opinions Expressed On The Literary Use Of Graduates

Conflicting opinions on the literary use of graduates were given by university officials at Toronto. It started when E. C. Kyle, librarian of Queen's University, speaking in New York, claimed that "the average college graduate is illiterate and ignorant of all except text books."

Rev. H. J. Cody, president of the University of Toronto, was promptly in the defence of college men. "I think Mr. Kyle's statement is an exaggeration," he said. "It is certainly not my experience," he said. He elaborated his statement by telling of the growth of the University of Toronto library. Its circulation, he said, was five per cent greater this year than in 1932.

"Exaggerating" the Kyle remark as "quite extravagant," Rev. E. W. Wallace, president of Victoria University, said that while some students are inexperienced, many are not. He said he did not demonstrate so much general interest in reading, they were "quite literate."

Easy To Identify

Great Procession Of Britons Was Always Helping Someone

Mr. Bartle Fyre, one of Britain's greatest novelists, was due to arrive at a certain very busy and crowded railway depot. The chauffeur who was to meet him, inquired of his employer how he should identify Mr. Bartle.

"Look," said his master, "for a tall gentleman who is helping someone. That'll be him."

Burly enough, the chauffeur, walking down the length of the train, saw a tall gentleman assist an elderly lady from a compartment, gather up two large bundles and three brown-paper parcels, and help her on her way, just as though she were his mother, or even his housewife.

Prefer Real Fire

Electric Fireplace Does Not Appeal To Queen Mary

Queen Mary likes the old-fashioned hearth, and in expressing this preference she is not unlike the majority of women. There is something cold and unhome-like about an electric fire, most think. Of course it may be all imagination—but they don't always think that imagination goes a long way? Plans for heating some of the rooms at Marlborough House by modern electric fires with no suggestion of flame did not appeal to the Queen. She insisted on having "something real to look at."

The two most precious things in the world are money and justice. Neither can exist apart from the other.

Put a few drops of deodorant alcohol on top of enamel after using, and it will prevent formation of "enamel scale."

Discovery of complete freedom from rust, smut, mildew and other diseases in the new species of wheat, Triticum Timopheevi is exciting wheat breeders throughout North America. Dr. J. B. Harrington, professor of field husbandry, University of Saskatchewan, found during his recent visit to Washington to deliver an address at the meeting of the American Society of Agronomy, Doctor Harrington revealed that the University of Saskatchewan has plants of this wheat growing in the university greenhouses for crossing with bread wheats. He expects to be able to plant seeds from the cross early in the new year and be ready for planting another generation in the open in the spring.

Triticum Timopheevi, a new species of wheat, was discovered in central Asia by one of the Russian expedition sent out by Dr. N. I. Vavilov, the famous Russian plant scientist. Doctor Vavilov, well known to scientists here, having visited Saskatchewan a few months ago.

In the United States, Doctor Harrington found Dr. A. A. Clarke of the U.S.D.A. service at Washington, Dr. L. R. Waldron, North Dakota, and Dr. H. Shubert, California, to name a few, all of whom are working on wheat, all in the line of cross-breeding from the new wheat.

When Timopheevi is used as the female parent in a cross with bread wheats, an etalon, an emmer, has 28 chromosomes in each plant cell compared with 42 for bread wheats. All wheats have more than 14 chromosomes.

When Timopheevi is used as the female parent in a cross with bread wheats, there is a good seed setting of big fluffy heads but they are practically all sterile.

Why a bread wheat is used as the female parent the seed setting is low but the seeds have large embryos but the seeds are not so good. These seeds may be back-crossed with bread wheat to get fully fertile seeds. The breeders are speeding up the work by growing plants under electric light in greenhouses to get three generations a year.

The interest in Timopheevi crosses lies in the type of resistance to disease. A report by Dr. Clarke compares the different types of disease resistance in which the disease organisms cannot enter the host plant, with the "near-immune" reaction obtained in wheat in which the disease organisms enter the host, but usually cannot develop further.

Junior Swine Clubs

Bulletins Used For Reference For Boys And Girls

Owing to popular demand, particularly from members of Boys' and Girls' Clubs, a new reference publication "A Study of the Dressed Hog" has been necessary. The publication is an elementary study of the care of the hog, its relation to its commercial value. The bulletin which is well illustrated is of practical interest to farmers generally and is a useful reference for members of the Boys' and Girls' Clubs. Copies of the bulletin, published by the Publicity and Extension Branch, Dominion Department of Agriculture, Ottawa.

Hundred Thousand Workers

Krupp Gun Plant Celebrates Its 15th Anniversary

The historic Krupp Gun Works celebrated its 15th anniversary on Nov. 20, busier than at any time since the World War. Bonuses were distributed to former employees and their widows to express the Krupp family's recognition of the workers' share in the creation and development of the vast enterprise which began in 1811 as a small steel foundry. The pay-roll now includes more than 100,000 workers. In the World War there were 175,000, and one of the most pressing problems is the shortage of skilled labor.

Different In Their Country

Chinese Students Think Canadian College Life Very Boring

Woo Da Ling, Chinese student completing his education at the University of Toronto, believes college life in Canada is much busier than in his own country. He was amazed at the number of campus activities going on at the same time. "During leisure hours Chinese students like to talk about politics rather than campus life," Mr. Woo stated.

It takes a mighty good bookkeeper to make a deficit look like a surplus.

Crocheted Lace Breathes Elegance!

Household Arts Alice Brooks Prefers Real Fire Electric Fireplace Does Not Appeal To Queen Mary Queen Mary likes the old-fashioned hearth, and in expressing this preference she is not unlike the majority of women. Put a few drops of deodorant alcohol on top of enamel after using, and it will prevent formation of "enamel scale."

FAMOUS ARTIST EXAMINES SELF-PORTRAIT

Value Of The Farm Is Recognized As Foundation Of Our Material Civilization

"Christmas and the Farm: The Farm as Food."

Christmas should see a revival of this ancient Christmas toast. These were the days when the value of the farm was universally recognized, but in the whirl of modern life the farm, as the sure foundation of material civilization, is apt to be forgotten. The word farm means food and was so called because in older times the farm was required to provide the household with food by way of rent. To-day this definition has been considerably extended in that the farm supplies the nation with food, and without food, without the feeding of the multitude, it is not given to human beings to be able openly to express that spirit of universal kindness and peace and good will evoked by the teachings of the Master in the celebration of the festival of Christmas.

The connection between agriculture and Christmas has been intimate from the beginning. It was to shepherds watching their flocks by night that the words "Fear not; behold, I bring you good tidings of great joy" were addressed. It was on a lonely stable at the manger that the Saviour of the World was born, and a few days later it was on the back of the most material farm animal, the ass, that he was borne to Egypt in safety.

It was from the agricultural population mainly that the early Christian drew their adherents, and many years later it was over the farms and orchards in the vicinity of the manger that the early Christians secured the country in search of holy treasures to decorate their churches and dwellings at Christmas.

Meanwhile, the farm, as ever, continued to furnish the wherewithal for the feast, and at the same time, as centuries rolled by and towns became swamped in their own activities, it was the farm that supplied the kindly, ancient rites of the feast. Many centuries later, Charles Dickens restored to the townfolk of England something of the joy and beauty of the spirit of Christmas which still flourished among agricultural communities. Even to-day many of the ancient agricultural Christmas customs, as distinct from the towns, survive, some of them in modified conditions. "There is Plough Monday, for example, which is still observed in several counties," including the British Isles. In the north of Europe, Plough Monday marked the end of the Christmas holidays. It was held on the first Monday after New Year's, after the Twelfth Day. It was customary on Plough Monday for the ploughman to return to the farm the following day, to draw a plough from door to door of the parish to solicit "plough money" to spend in a frolic. The queen of the banquet was called Bessy.

Then there was the ancient feast of the hearth, which was held in at least three distinct communities in England—at Queen's College, Oxford, on Christmas Day, and at the annual Christmas banquet of the City of London at the Guildhall and of the Westminister College of Chaucer in London. The proceedings are much the same. Trumpets sound and the bear's head is carried in procession, escorted by chorists singing the old carol "The boar's head in hand bring I." At the City of London feast, the master takes the lesson from the boar's jaws and at Oxford the Provost takes the orange and presents it to the principal singer. At the Cutlers' Hall, the president of the feast accepts the present of a pot of mustard, and extols the circumstances of the feast. This reference to mustard must be very odd, because in a carol that had been in force for centuries before, Wynken de Worde printed the words in 1521: "A.D., the last line of which runs 'The boar's head with mustard'."

The phrase "Christmas Box" originated in the early Christian times. It was really then a box which was placed in the church for promiscuous charities and was opened on Christmas Day. The contents were distributed the next day (Boxing Day) by the priest, and the contributions consisted of cash, were known as box money. However, farmers were accustomed to leave their contributions in kind, eggs, butter, flour, meat, and other agricultural products, much the same as the farmers of Quebec have done in the past at the church entrance on Thanksgiving Day, the results of the sales of which go towards money for the souls of relatives. In many churches in Canada, the accumulation of Christmas gifts is distributed in

much the same manner as in the earliest Christian days.

And at this Christmas, as in the days gone by, the farm has furnished the chief resources for the Christmas feast, such as the meat, the turkeys, the geese, the ducks and chickens, the cereal foods, the vegetables, the cream, milk, eggs, and cheese, not forgetting that many of the other essentials, the candles and confectionery, the pickles, cigars and cigarettes, are all of agricultural origin.

So once more, the ancient toast, "Christmas and the Farm: The Farm as Food."

High Grade Wheat

Protein Content of 1936 Crop Was Highest On Record

Protein content of the 1936 red spring wheat crop in western Canada is the highest on record, while the 1937, had the lowest protein content, according to the annual report issued by the grain research laboratory of the board of grain commissioners for Canada.

Samples tested since the new crop commenced to move from farms into the market, taken from various shipping points in Manitoba, Saskatchewan, Alberta and British Columbia, the collections were restricted to grades No. 1 hard to 4 northern, inclusive, and Nos. 1 and 2 Garnet.

The most notable feature of the analysis conducted during the season was the high level of the protein content. The general mean average for the crop is 14.9 per cent., or 1.0 per cent. higher than that recorded for any of the previous seasons. The report points out that the extremely high protein content of the 1936 crop is directly attributed to hot, dry weather during the growing season.

There Is A Reason

Why Women Can Stand Cold Better

If the first winds of winter make you shiver under a heavy overcoat while your neighbor goes bravely about wearing a light sweater, blame it on your metabolic count.

Dr. J. H. J. Upham, president-elect of the American Medical Association, said that most persons complaining of the cold had low metabolic counts. He doesn't explain why a man reacts differently at low temperature than does his wife.

"There is under the skin of girls and women, a layer of fatty tissue which not only makes them rounder, but helps to keep body heat in and cold out," he said. "That explains why a woman can be comfortable in the coldest dress, while her husband, clothed in a wool suit weighing two or three times as much, is chilled."

Fight With Lion

Trained Lion Mauled Dancer to Death

A trained lion mauled and bit Gladys Cole, dancer from Chicago, at the close of an animal act on the stage of a Baltimore theatre.

Dr. Noble Hamster, the animal trainer, fought the surly lion on a chair after employing two platoons loaded with blanks at the sight lions in the cage. Stage hands dragged Miss Cole, who had fainted, out of the cage.

She suffered severe lacerations. Her condition was described as "satisfactory."

The curtain was dropped during the commotion. Bob Dupont, a juggler, went on with his act as usual, and the roar of the lions came from behind the curtain and the audience remained seated.

A Matter Of Principle

When William died suddenly the neighbors were shocked, and a kindly woman proceeded to comfort William by describing his good points.

"He was such a man of principle," said the neighbor.

"And am I not the one to know it?" said the bereaved woman. "Every Saturday night didn't he come home and place his gay envelope in front of me as regular as clockwork? Not a night did he miss it. The crown—his turban—as you call it, was as changeable as your varying mood. Then, at it all your curls, tucked like the under your arm, and you're ready for any outfit. In pattern 5748 you will find instructions for making the set; shows an illustration of it and of all the stitches used; material required."

To obtain this pattern send 20 cents in stamps or coin (note preferred) to: Household Arts Dept., Winning Newspaper Union, 175 McDermott Ave., Winnipeg.

St. John Lavery, famous British artist, examines the picture he painted depicting himself visiting Christ Temple in Hollywood. The picture is shown in the exhibition of the Royal Society of Portrait Painters at the Royal Institute Galleries, London.

Presents Big Problem

Mating Qualities Of Canadian Barley Are Being Studied

While the advent of the smooth-surfaced barley has been evoked by Canadian scientists for Canadian soils has been enthusiastically hailed as a signal advance in barley improvement, there still remains the mating quality problem. The barley crop in Canada is used mainly for feed and for malting. The report points out that the extremely high protein content of the 1936 crop is directly attributed to hot, dry weather during the growing season.

The problem is a big one and is responsible for the new barley breeding activity in Canada. At the University of Saskatchewan two very successful crops of hybrid barleys were raised during the 1935-36 winter, and a total of 125,000 second hybrid generation seeds of six different crosses was produced. In the spring of 1936 these seeds were sown, and 5,000 of the most promising plants are at present being tested in the cereal breeding laboratory of the university. As a result of this and other barley improvement projects now under way in Western Canada, it is expected that high-yielding, smooth-surfaced varieties with high malting attributes will be produced within the next three or four years—Branford.

Ides For Bookkeepers

Boy born male named with powdered skin milk has been discovered by University of Minnesota scientists to be a good substitute for beer. In certain seasons shortage of natural pollen for active brood rearing in the spring is an acute problem among Minnesota beekeepers.

Two seedling watermelons were produced in North Dakota at an agricultural experiment station this year.

An Exclusive Alice Brooks Design

Behold—the latest headlines in crochet—a turtleneck and purse to match!—a large bow—these stitches "quick work" of this machine, which is an absolute necessity in any single crochet, only the rope-like trim in one of two colors being in a different stitch. The chemise of Germanism. Daint, cream or gold—the crown—for this turtleneck as changeable as your varying mood. Then, at it all your curls, tucked like the under your arm, and you're ready for any outfit. In pattern 5748 you will find instructions for making the set; shows an illustration of it and of all the stitches used; material required.

To obtain this pattern send 20 cents in stamps or coin (note preferred) to: Household Arts Dept., Winning Newspaper Union, 175 McDermott Ave., Winnipeg.

Soy Bean Cultivation Will Provide Winter Work For Farmers Says Henry Ford

Has Become Big Business

Great Industry Of Pests Handled By Express Companies

Transportation of pests has become a big business in United States, and of estimated 11,000,000 dogs alone hundreds of thousands travel yearly by rail, declares C. R. Graham, vice-president of Railway Express Agency, in a report just issued. However, not only dogs travel, but lions and leopards and cats and pet pythons are included in the wide variety handled by the expressmen.

"Large individual breeders in various parts of the country ship from 100 to 150 dogs daily to purchasers and pet shops, and a surprising number of families carry their dogs with them on their travels," says Mr. Graham. "The dog is the most traveled of all animals, and, like humans, dogs differ in their travel capacities. The bulldog, usually good natured and stolid, usually travel well, while some, high-spirited collies, setters and some of the terriers and small house dogs require greater care. They are especially susceptible to open climates, and expressmen must remain very calm, quiet and unobtrusive in handling them."

"Strangely enough," Mr. Graham continued, "wild animals stand travel better than dogs. They seem to have the power to withdraw into themselves and doze through most of a trip while the dog, with his more human sensibility and emotions, is usually on the alert for strange sights, sounds and smells, from which he keeps up his master's vivid world. Even though the wild animal's senses are keener than a dog's, the brain which receives and interprets that information is far less so. Many dogs seem to possess, at least intermittently, what intelligent humans would call the power of thought."

"The express man never knows what to expect, or what shipper will do," he said. "But if he has been in the service long, he has had so many unusual experiences that he becomes impervious to them. And the average rate is at least 99 to 100 that you won't ship anything that he doesn't know how to handle."

Have Always Had Protection

India Becomes Established In Canada From Earliest Times

The system of reserves, whereby particular areas of land have been set aside for the use of Indians, has been established in Canada from the earliest times. It was designed to protect the Indians from encroachment, and to provide a sanctuary where they could develop unmolested until advanced civilization had made possible their absorption into the general body of the citizens.

Indians are minors under the law. They are under the control of the Indian Affairs. The activities of the department as guardians of the Indians are in the control of Indian education, health, etc., the development of agriculture and other pursuits among them, the administration of their funds and the general improvement of their welfare.

According to the last census there are in Canada 123,811 Indians—92,945 males and 30,866 females. About 112,500 live on the reservation.

The department of Indian affairs feels there is no foundation for the common belief that the Indians of Canada are a vanishing race. The census which is taken at five-year intervals has shown a substantial increase in each of those periods during the past fifteen years at least.

Quite Easy To Get

Guardsmen Found Out How Preventing Arms Canned Jingle

He was a tall, square-shouldered fellow, his moustache bristled, and his steel-grey eyes gleamed when he recounted his army days.

"You" he said, looking down at his insignificant companion, "when I was in the Guards the drill was perfect. When we presented arms, all you could hear was 'Snap, snap, click!' Were you in any regiment, my good man?"

"No, sir, of ya know, I was in the Lancashire Fusiliers," he replied. "Drill wasn't so bad, ya know. When I was on parade and presented arms, all you could hear was 'Snap, snap, click!'"

"That's impossible," the Guardsman exclaimed. "There on earth do you get the jingle?"

"Oh! replied the man in a modest tone, "mumfords!"—London Tit-Bits.

Arizona's petrified forest contains 25,625 acres.

A paying winter job for the farmer has been found by Henry Ford. He set out six years ago to develop a system dovetailing with previous expensive theory that "if we want the farmer to be our customer, we must find a way to become his customer."

While various farm products have been tested for more remunerative commercial uses on the Ford experimental farm, he concentrated heavily on soy beans, previously held valuable only as livestock food.

The oil from the beans was found to contain matter which could be used in making an enamel for painting automobiles bodies. It was also found that the oil could be mixed with sand to make a very fine concrete. The meal or residue after the oil is extracted, is an excellent food for cattle because of its high protein content of 45 per cent. In the laboratory it was found that it could be made into a plastic material.

Thousands of gallons of oil and thousands of bushels of meal from the beans are made into plastic materials, the horn button, the gear shift lever ball, the distributor case and cover, various trim strips and many other articles.

Thousands of gallons of oil and thousands of bushels of meal from the beans are made into plastic materials, the horn button, the gear shift lever ball, the distributor case and cover, various trim strips and many other articles.

It is a good crop for farmers. The beans are easy to grow, and the other outdoor fall work has been finished. It does not hurt the beans to have them freeze. And they don't require a great deal of cultivation.

Carrying still further his idea that the farmer becomes an industrial worker, Mr. Ford has developed a processing unit which he believes can be purchased by small groups of farmers for \$2,000 to \$4,000. The farmers, he contends, can process their beans, extracting the oil, during the winter, when there is little work on the farm. The oil would be sold for industrial purposes, and they can sell the meal or feed it to their livestock, he says.

"The process of extracting the oil is simple. The dried beans are fed between two heavy rollers, which roll them into thin flakes, and they pass into the extractor, a pipe set at a temperature of 160 degrees Fahrenheit. The beans are fed into the bottom and are forced along by a screw conveyor. The solvent, a high-grade gasoline, washes the flakes, and the oil is absorbed into the flakes. The flakes are moved into a steamer, where the solvent is evaporated and driven off by a current of steam. The flakes, now granular, are dried by steam heat and pass on to bags. There is a small amount of oil in the steam and the oil and gasoline are separated.

As he watches a press mold distribute the oil from the plastic material, the beans of which is soy bean meal, Mr. Ford noted that from each moulding process, under pressure and heat, there was a slight discharge of material.

"Why not make fertilizer from this waste?" he asked. "It has the proper ingredients."

Thus another idea was born, and it is able to predict that chemicals will be developing it.

Research work toward industrial utilization of farm products has only started, Mr. Ford says, hoping for the day when surpluses will cease to be a problem and instead will provide the farmer with cash income for products not used for foodstuffs.

Eximates Old Trick

Turn Back Wolf Packs Stampeding Reindeer In Alaska

An old Eskimo trick for driving native turn back wolf packs which repeatedly stampeded 2,000 reindeer being driven across 500 miles of Arctic wastes to Ingher-stricken Barter Island.

Chunks of frozen tallow were dropped in the path of the wolves to snap up. Inside each chunk the Eskimos had bent a six-inch piece of washboard, sharpened to needle point. When the tallow melted, the washboard springs open, piercing the wolves' stomachs—and slow death is theirs.

Deer for the Barter Island drive were taken from the Point Barrow area. Several hundred reindeer, a few wolves were reported near starvation in the Barter Island area last summer.

A. MASKELL

Wind damage has been considerable in various parts of south Alberta and south Sask.

A general meeting of the Medicine Hat provincial Liberal Association will be held in the Hat on Friday, May 21st.

Mrs. J. Rieker's many friends will be pleased to know that she is now able to go around again. At present she is visiting Mrs. Towle in Medicine Hat.

Miss Davies, of the Hat hospital nursing staff is, enjoying a few weeks holidays here with her parents Mr. and Mrs. G. Davies.

Mr. Dan Forget who has been in the hospital for the past few weeks as a result of an accident at the Glass Factory, is now improving nicely.

Mr. C. G. Hougvelt, who has been connected with the Dominion Glass Factory here for the past three years, has severed his connection with the plant and has left for Winnipeg where he has secured a position in his profession with the Manitoba Bridge and Iron works. Mrs. Hougvelt and family will leave shortly to join him.

During their stay in Redcliff Mr. and Mrs. Hougvelt have made many friends who will regret their leaving and wish them success in their new home.

Tenders for preparing the Legion grounds for a bowling green will be received. Tenders wanted at once. Apply to Joe Podesta, Chairman of Com.
